

Access 800mm Wide Cabinet Vertical Brush Strip Blanking Panels.

Available to suit 800mm wide Access cabinets these quick fit rotating vertical brush strip baffles stop hot air recirculating around to the front of the cabinet by filling in the aperture between the mounting angle and the side panel.

One of the basic requirements for providing efficient cabinet cooling is the ability to stop hot air / cold air cross over. Failing to address this issue can result in the hot air expelled by the active equipment recirculating inside the cabinet structure. This scenario can ultimately lead to extreme hot spots, which in turn can cause premature equipment failure.

Forming an effective barrier these vertical brush strip baffles can easily be configured to suit a wide range of installations including those incorporating mixed technologies such as servers and switches.

For normal server applications these baffles would be fitted either side of the front 19-inch mounting angles.

Where mixed technologies such as servers and switches need to be housed the baffles can be staggered creating two "L" shaped voids. Typically a baffle would be fitted on the front left hand side providing a cold air void along the front and right hand side of the cabinet. The hot air void would then comprise of the opposing "L" shaped void down the left hand side and rear of the cabinet.
